

Pallet Technologies

The Pallet Materials and Technology of Tomorrow - Available to you Today!

Fiber reinforced polymer composites are synergistic combinations of fibers - such as glass or carbon - surrounded by a supporting polymer. The end result is a flexible material with multiple advantages.

New Concept Composite Pallet with:

- Bio Options
- Technology Options
- Leasing Options

- Stronger and more durable than wood
- Made from recycled material
- More environmentally sound
- Can be readily cleaned
- Impervious to infestation
- Consistent size, shape & weight
- Passes all standard pallet testing
- More cost effective
- **Active RFID** vs Passive RFID
- Track pallets anywhere worldwide
- Software and scanning solutions
- Unparalleled product support
- Only Biocomposite Pallet with **Active RFID** Option

Pallet Technologies is now offering pallet solutions that are superior to current wood alternatives.

Our plastic pallets are more durable with a longer life cycle, cost effective, and more environmentally sound.
